

XDS Receiver Discovery Tool Quick Start Guide

The XDS Receiver Discovery Tool allows the user to view details about X-Digital receivers connected to the local network, including:

- The receiver's IP address
- The receiver's station name
- The type of receiver
- The code version the receiver is currently running
- The receiver's board revision
- The receiver's serial number
- The receiver's status
- The receiver's past faults

To Install:

1. Download the XDS Discovery Tool msi install file.
2. Double click the install file. Follow the instructions in the dialog.

To Uninstall

1. From the Windows Start Menu, select Control Panel and then 'Add/Remove Programs'.
2. In the Add/Remove Programs dialog, select 'XDS Discovery Tool'.

To Upgrade From an Older Version

1. Follow the 'To Uninstall' directions above.
2. Follow the 'To Install' directions above.

Usage:

The Start button begins locating receivers connected to the network. Unless the Stop button is pressed, the search will run for 10 seconds. The amount of time to search can be changed by clicking on the Advanced Options link and changing the Time To Run parameter. The list of receivers found can be cleared using the Clear List button.

Features to note:

- Clicking on a receiver's IP will open up a web browser with that receiver's Web Interface.
- Hovering over the Status and Past Faults columns displays the warning messages associated with the status code.

Troubleshooting:

Here are a few important things to consider if you are having trouble running the XDS Receiver Discovery Tool:

- The Microsoft .NET framework must be installed for this application to function. The .NET framework can be downloaded from [here](#).
- For the application to run off of a local intranet the .NET framework must be version 3.5 or above.
